

ROCKER ARMS

PA0069 - R190S

FAI part number R190S is available in two designs, developed to align with updates introduced by the OEM. The later version is identified as R1002S.

Both designs serve the same function and are fully interchangeable. Unlike the OEM, FAI continues to supply both versions, providing you and your customers the option to replace like-for-like.

The differences between the two are easily identified visually, with no measuring equipment required.

Please refer to the guide below when discussing this with your customers.

EARLY DESIGN: R190S

LATE DESIGN: R1002

Noteable difference: Lateral restricter design
(stops side-to-side valve movement)

Please note: FAI part number CSK3478 (camshaft kit) will continue to be packed with the older design R190S.
