

**Issue: Older Ford engines with centrifugal oil filters need a head with an oil feed hole, but newer heads are not drilled for it.**

Older Ford heads had a hole in the area shown in the circle below, which was needed for the oil feed to the centrifugal oil filter. Ford eventually stopped production of the filter so the hole was no longer needed.

If your engine has the old centrifugal system, you can use the FAI **BCH020** cylinder head. If using this, you will need to remove the oil pipe from the block and seal the hole in the block using the Ford plug, Finis No. 1512462.

**Ford plug  
Finis No. 1512462**

## ENGINE CODE

**H9FA | H9FB | H9FD | JXFA | JXFC | JXFD | PHFA | PHFC**

*FAI products are designed for use in standard, unmodified vehicles and are not intended for custom or altered applications. All components must be installed by a qualified technician.*
